REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

1. After a careful review of the related prior art, the claims as presented are deemed to be allowable. The prior art does not disclose a steering apparatus for use with an exercise bicycle that is connected to a video game simulation wherein the apparatus comprises a steering mechanism having a plate, with a potentiometer mounted thereon, and a tube in which the tube is disposed within an exercise bicycle frame head, a steer frame, rotatably mounted within the tube, having at least one spring with one end attached to the steer frame and the other end attached to the plate such that when a user rotates a handlebar of a bicycle attached to the steer frame, a progressively varying linear resistance is produced and the potentiometer produces a corresponding electrical signal. Furthermore, the resistance of the spring increases when the handlebar rotates either left or right but decreases when the handle bar returns to a center position thereby duplicating the feel and impression of riding a bicycle.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Buckley '817 discloses an apparatus having a controller comprising a handle bar that includes an input device adapted to generate a signal in response to movement of the handlebar and a means to resistance rotary displacement of the handle bar.

Yang '917, Wu '952, Nussbaum '737, Caprai '015 and Rice '190 each disclose a controller comprising a handle bar that includes an input device adapted to generate a signal in response to movement of the handlebar.

Houle '745, Mitsuyoshi '787 and Chen '099 each disclose video game control units having a steering wheel that includes self-centering means.
